                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 7. Application US/08742440A
Patent No. 5892014
GENERAL INFORMATION:
APPLICANT: Coughlin, Shaun
APPLICANT: Connolly, Andrew
TITLE OF INVENTION: Protease Activated Receptor
TITLE OF INVENTION: 3 and Uses Thereof
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ZOUNTIER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 96,

Squence 23299, Application US/0925291A

Patent No. 6551795

GENERAL INFORMATION:
APPLICAMTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A
FILE REFERENCE: 1099-02-18
FILE REFERENCE: 1998-02-18
FRICK APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                              Gaps

Sequence 27, Application US/09723251A

Patent No. 6608028

GENERAL INFORMATION:

APPLICANT: Clark, Youne May-Yee

APPLICANT: Clark, Ross G.

APPLICANT: Comman, Andrea G.

APPLICANT: Comman, Andrea G.

APPLICANT: Comman, Andrea G.

APPLICANT: Robinson, Iain C.A.F.

APPLICANT: Skelton, Nicholas J.

TITLE NEPREMENTON: INSULIN-LIKE GROWTH FACTOR AGONIST MOLECULES

FILE REPERENCE: P1071P2C1.2Rev

CURRENT APPLICATION NUMBER: US/09/723,251A

FRIOR APPLICATION NUMBER: US 09/337,227

PRIOR APPLICATION NUMBER: US 09/337,227

PRIOR FILING DATE: 1999-06-22

PRIOR FILING DATE: 1997-04-04

NUMBER OF SEQ ID NOS: 51
                                                                                                                                                                                                GENERAL INCORMATION:
APPLICANT: Chen, Yvonne May-Yee
APPLICANT: Clark, Ross G.
APPLICANT: Cochran, Andrea G.
APPLICANT: Cochran, Andrea G.
APPLICANT: Cochran, Andrea G.
APPLICANT: Lowman, Henry B.
APPLICANT: Schinen, Iain C.A.F.
APPLICANT: Skelten, Nicholas J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
